

BBj Release Candidate 2 Is Here

The BBj Release Candidate 2 is now available and BASIS is on schedule to deliver the much anticipated, full product release of BBj on March 30, 2001.

So much has gone on with the development since our Open Beta testing last November and Release Candidate 1 in January. Speed and performance now match those of most PRO/5® and Visual PRO/5® installations. But BBj gives Business Basic developers so much more functionality with thin client capability, new verbs and commands, vastly improved SQL/data access capabilities, and the networking and distributed computing advantages of Java.

Register for TechCon2001 Now

TechCon2001 is only a few months away. Have you registered? Find out more about the most important Business Basic technical conference this year and register. We've now posted information about track/breakout sessions, registration, exhibitor and sponsorship opportunities, training, events and companion activities.

If you develop with Business Basic, you can't afford to miss this conference. At TechCon2001, you will see the full capabilities of BBj, the most exciting development in Business Basic since it was ported to non-proprietary hardware. You will see the full product suite in action and learn how to make money with BBj.

BBj provides a direct line to modern application development with industry-standard features and functionality geared to distributed computing.

Conference tracks and breakout sessions will focus on the following critical paths:

- GUI Enhancement of Legacy Applications
- Web-Based Development
- Modernizing Data Access
